

Key Information Sheet

DuPont™ Corian® Custom Color Program

DuPont™ Corian® is proud to announce its Custom Color Program. DuPont can manufacture Corian® to match most desired colors. There is no minimum order quantity and our lead time averages between four to six weeks for delivery.

Solid colors: DuPont™ Corian® is able to make near exact matches with solid color requests. If an existing color adhesive or the use of our new translucent adhesive does not create a perfect match, we will make an evaluation of the adhesive and use the information to determine if a custom color adhesive is needed. We can make custom color adhesives in small quantities if determined necessary.

Particulate colors (Patterned/Speckled colors): DuPont™ Corian® has over 100 groups of existing grinds or particulates to help create as exact a match as possible to your desired color.

- Particulate color will be matched as closely as possible to your need.
- We have a limited supply of mica pigments. Mica Pigments create a “sparkly” or “reflective” appearance through the solid surface.

How it works:

1. Please fill out a web form for each project or opportunity.
2. Samples to match (i.e. fabric swatch, paint chip, logo, Pantone color code, etc) will need to be submitted to DuPont.
3. DuPont will evaluate the custom color request and give you a price based on volume, color complexity and cost. (timing)
4. Samples will be sent to you for approval.

Pricing:

Price varies upon volume, color (solid or particulate) and complexity to manufacture --the higher the volume, the lower the price.

Lead times:

- The lab's typical turn-around for sample plaques is a week.
- Once our lab's samples have been approved by you and an order has been placed, lead time will be an average of 4 to 6 weeks.
