

DuPont™ Corian® and Zodiaq® Surface Products are now Seamlessly Integrated Within Architectural Design Software

ARCHITECTS AND DESIGNERS NOW HAVE INSTANT ACCESS TO CORIAN® AND ZODIAQ® COLORS, SINKS, COUNTER, AND PANEL SHAPES IN REVIT® AND OTHER DESIGN SOFTWARES-- SIMPLIFYING THE MATERIAL, SHAPE, AND COLOR SPECIFICATION PROCESS

Specifying Corian® and Zodiaq® materials, sinks and panel shapes is simplified for architects and designers, thanks to a seamless integration with the Autodesk Revit® software program. Professionals using the software now have instant access to Corian® and Zodiaq® materials, shapes and colors, enabling them to create color-accurate renderings of counters or exterior and interior room paneling, quickly and more efficiently.

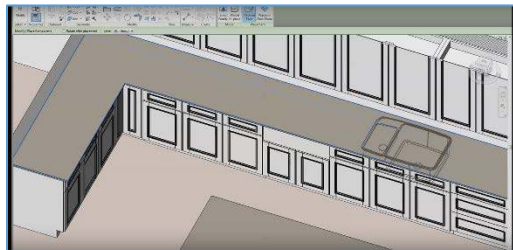

Autodesk Revit® is the leading Building Information Modeling (BIM) software used by architects and designers to design buildings, specify products and render photo-realistic images. Now, Autodesk material library and object files have been created in the software, enabling Revit® users to integrate Corian® and Zodiaq® products and colors directly from the Autodesk Seek® catalog into their drawings, eliminating extra tasks in the design process.

See how easy it is to insert our materials and objects in your Revit® design in our tutorial video: <https://youtu.be/RYZG6sr2Q-I>

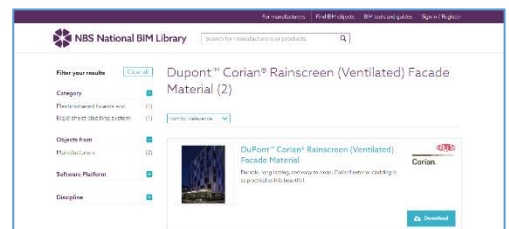

Inclusion of the Corian® and Zodiaq® material libraries in Autodesk Seek®, allows Revit® users to save Autodesk Material Library Files locally on a computer or to a centralized network for easy access or sharing by multiple people. They can easily navigate the Revit® file to access product information needed from DuPont, including the colors, sheet/slab sizes and thickness, the regional availability, links to technical specs, and more. They can then instantly apply the Corian® and Zodiaq® surfaces, and surface options such as backsplashes and edging with photo-realistic accuracy, throughout their model.

At DuPont, we are committed to making the inclusion of our surface products an integral part of the BIM workflow. DuPont is always seeking ways to improve the design and specification process for architects and designers, and the incorporation of our Corian® and Zodiaq® material libraries and shapes into design software packages reduces steps in the process significantly.

The libraries are available for download on Autodesk Seek®, the leading repository for BIM Content at <http://seek.autodesk.com> by searching for DuPont, Corian®, or Zodiaq®.

In addition to the integration of our products in Autodesk Revit® software directly, we also provide our European products in a BIM material and object set hosted in the NBS (National Building Specification –UK) product library. By hosting our product BIM libraries in multiple places and formats, we hope to make the specification process even easier with choices customized to the architect's design tool preferences, processes and location.

The NBS libraries are available for download on <https://www.nationalbimlibrary.com/duPont-corian>
